SCHEMA ST4
The component content management system
With SCHEMA ST4 you can create and manage multimedia content for publication in various formats.

Prepare modular content, edit and draft texts in editors like Microsoft Word, and leave the rest to SCHEMA ST4 – no programming skills are needed. Customise the SCHEMA ST4 interface to suit your everyday needs and start typical authoring processes – such as approvals – in ST4 to enjoy a software-supported workflow.

Advantages of a component content management system

- **An all-in-one solution**
  Create modular content using SCHEMA ST4 so that it can be reused and combined as desired. Then publish it as documents, websites, online help systems or much more besides!

- **Translation**
  You can manage your multilingual content in SCHEMA ST4. Thanks to the clear overview and useful functions, you will always know which texts, images and variables have already been translated into which languages.

- **Improved content**
  Improve the lasting quality of your content using the dedicated functions, allowing you to focus on content creation again.

- **The solution**
  Master the numerous, multilingual content variants and ever shorter deadlines in the world of technical writing with SCHEMA ST4.

**DID YOU KNOW?**
Component content management systems are not just suitable for use in technical writing. They also come into their own in other industries where multiple versions of very similar documents have to be created, including multilingual documentation.
Time for more efficiency!

Versions, variants and languages – no problem thanks to SCHEMA ST4.

In ST4 you can create and reuse modular content that sits perfectly in line with your vision. You will always know what content has been reused where or which version you are currently working on. This modular content can be nested right down to word level. With SCHEMA ST4 you can always keep an eye on things, whatever the level of complexity. Variants can be created at the touch of a button based on filter criteria. These filter criteria and metadata enable you to easily find even the most specific content again.

DID YOU KNOW?

Modular, intelligent content is the key to content delivery and Industry 4.0.
Multilingualism and translations
With SCHEMA ST4 you always know which of your modules are available in which languages or are currently in translation.

SCHEMA ST4 stores multilingual document structures. When you send texts to translators using SCHEMA ST4, only content that has not yet been translated is exported. What’s more, the authoring assistance and terminology management functions ensure texts are consistent not only in your own content but also in the translations.
You can create any standard target format with SCHEMA ST4 – from eLearning programs and online help systems to printed documents or content delivery. You create the layouts for each format yourself in SCHEMA ST4 as a template and can easily make changes to them, for example for the next CI adaptation. You have full control of the layouts for all target formats!

DID YOU KNOW?
Formats used in templates are inheritable, meaning that elements such as fonts only need to be changed once and in only one location.
Automation made easy

SCHEMA ST4 helps you to keep your authoring processes consistent.

With the workflow module for SCHEMA ST4, it’s easy to automate your individual processes yourself. From the review or gathering information about deadlines right through to automated reminder e-mails, you can use the dedicated workflows to ensure that approval or publishing tasks are carried out on time by your team. The Workflow Designer is the nerve centre of this entire operation. Create workflows in the graphical interface and select from a range of predefined automated procedures, making programming obsolete.
